

Food delivery service

The aim of this web project is to develop a food delivery system. This service will allow people to order food in various restaurants or cafés with delivery. They may choose among different establishments. At each establishment, the customer may choose a food of interest to them., read its description, look at the rate and order it. They can connect their credit card to their account thereby paying for the order or pay in cash when the order is received.

Functionality:

- 1)Search (establishments,meal)
- 2) Attach a credit card to an account.
- 3)Rating(establishment,meal)
- 4) Shopping cart
